In today's world we face a unique problem that mankind has never had to deal with in the past. We have a problem of obesity and excess calorie intake as well as inappropriate nutrition, while at the same time we face problems of malnutrition in terms of low calories but also specific nutritional deficiencies, many of which are still being recognised through research today. To address these problems, we need a real focus on the importance of the quality of food we eat and therefore the ability of the planet to provide. Furthermore, this must be made available to an ever-increasing world population which will shortly reach nine billion people. Perhaps there has never been a greater challenge. I am delighted to support the 2018 Summit marking 10 years of the NNEdPro Global Centre for Nutrition and Health, which seeks to engage those interested in nutritional aspects of healthcare but also the wider imperative to maintain wellbeing for this global population.
